

Tunnel Vision

It's what won Sverdrup the first major contract in the 6.4 billion dollar Central Artery/Tunnel project.

But it goes beyond our ability to design a flawless connection between the immersed tube tunnel and the cut-and-cover tunnels that will connect the Massachusetts Turnpike with Logan International Airport.

It has to do with focus: the ability of our highly skilled staff of engineers to solve engineering challenges in an innovative, timely and cost effective manner.

That focus extends to every project we have...from the MBTA's Old Colony Railroad Rehabilitation Project to the MWRA's MetroWest Water Tunnel.

And that is why Sverdrup is most honored to be part of the Central Artery Tunnel Program...a project that will make Boston a better place to live and to visit.
